

Replacing Chlorination in Pools

The SixPower Solution for On-Site Water Production

SixPower introduces a revolutionary approach to swimming pool maintenance by offering the on-site production of water that contains 20-30 ppm of hydrogen peroxide. This water, treated using advanced cold plasma technology, possesses unique physical properties akin to dew and rainwater. These characteristics not only make swimming in such water highly beneficial but also serve as a preventive measure against various skin diseases.

Key Benefits of SixPower Pool Water:

1. Elimination of Chlorine:

- Traditional chlorination methods, while effective, often lead to skin irritation, unpleasant odors, and other health concerns. SixPower's water production method replaces chlorine with hydrogen peroxide, which is a much milder and more skin-friendly alternative. Hydrogen peroxide is a powerful disinfectant that ensures the water remains clean and safe without the harsh side effects of chlorine.

2. Unique Physical Properties:

- The water produced by SixPower technology mimics the natural qualities of dew and rainwater. This water is structured differently, with reduced cluster sizes and enhanced properties that are typically found in naturally occurring rainwater. These unique properties are attributed to the cold plasma treatment, which imparts the water with characteristics that are both refreshing and rejuvenating.

3. Health Benefits:

- Swimming in SixPower-treated water offers numerous health benefits. The presence of hydrogen peroxide at 20-30 ppm acts as a gentle antiseptic, helping to prevent and alleviate various skin conditions. Additionally, the water's unique physical properties promote skin hydration and regeneration, making it ideal for those seeking a therapeutic swimming experience.

4. Rejuvenating Water Procedures:

- The cold plasma technology used in SixPower not only enhances the disinfecting properties of the water but also transforms it into a medium for rejuvenation.

Swimming in this "rainwater" provides a refreshing and invigorating experience, akin to bathing in pure, natural waters, which can contribute to overall well-being and skin health.

SixPower offers a groundbreaking alternative to traditional pool chlorination by producing water with 20-30 ppm hydrogen peroxide on-site. This water, enriched with the unique properties of cold plasma-treated water, provides a safe, beneficial, and rejuvenating swimming experience. By turning your pool into a source of "rainwater" for swimming, SixPower transforms water-based activities into a holistic and health-promoting ritual, ensuring both safety and wellness in every swim.
